

ScadaGuard® is a full-featured text-to-speech alarm notification software program with a unique integrated remote access web server.

**STABILITY:** Many of our customers select our dialer to replace dialers from the biggest names in the business because their dialers lock up exposing them to huge liabilities. We have a proven record without lock-ups.

**DIRECT SPEECH SYNTHESIS:** If you can type it, our dialer will speak it without requiring any additional steps. With our smart tag importer, our dialer can even use a tagname directly if you like, further simplifying the setup process.

### ScadaGuard® DIALER FEATURES

- Up to 30,000 alarms / 30,000 web tags
- Up to 99 alarm groups
- Up to 99 contacts
- Support for multiple and Concurrent DDE server interfaces definable for each alarm
- Easily interfaces with all of the popular HMI applications (RSView®32™, GE Fanuc Proficy iFIX, Wonderware InTouch, Lookout, etc..) in a Windows environment.
- Sends alarm acknowledgements to HMI applications.
- No recording of messages required.
- No conversion of messages required.
- Text-To-Speech voice notification using included voice modem.
- Text-To-Speech voice notification using a local sound card.
- SMS / Text messaging
- Detailed Logging
- EMAIL notification

### ScadaGuard® REMOTE ACCESS FEATURES:

- Integrated web based remote access interface allows users to view their system from any computer, cell phone, or PDA that is equipped with a web browser that supports standard HTML based web pages.
- Data displayed in standard HTML provides the fastest possible web based remote access.
- Ability to display all system information (levels, pressures, flows, temperatures, etc..), in addition to alarms on the web interface.
- Unlimited remote connections allowed concurrently.
- Automatic creation of web pages and web page menu system from the tagname database using a unique web page AutoConstruct feature.

### DESIGN BENEFITS

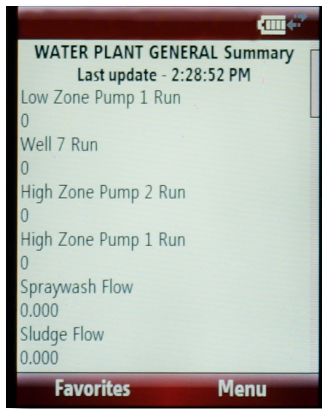

- Assignable web access port.
- No special remote access software or hardware required.
- No proprietary hardware required.
- No expansion PC expansion card required.
- USB Modem is Included in package.
- Definable watchdog tag with automatic detection and alarming when HMI application communication link is lost.
- Supports hot-standby / backup dialer over an Ethernet network.

## COMPUTER SYSTEM REQUIREMENTS

Actual system requirements vary depending on the number of alarms, Web display content, or other applications running on the computer. The following requirements are provided as a guideline only, actual requirements may vary:

- PC with 1 Ghz or higher clock speed (single or multi-processor system); Intel Pentium / Celeron family, AMD K6/Athlon / Duron family, or compatible processor recommended.
- 512 megabytes (MB) of RAM or higher recommended.
- 30 GB Hard Drive or greater recommended.
- CD-ROM or DVD drive.
- At least one unused USB port for license dongle. Important Note: Is likely that the voice modem used with ScadaGuard will be USB based, therefore the customer should make sure there is an additional port available for the modem as well as the license dongle.
- Sound Card and Speakers required if electing to announce alarms locally.
- Network adaptor is required if electing to use the optional Web Based remote interface. Network adaptor should be appropriate for the type of local-area, wide area, wireless, or home network you wish to connect to. You must have access to an appropriate network infrastructure.
- Operating systems currently supported include: Windows XP (Home, Professional, Media Center), Windows Server 2003, Windows Vista (Home Basic, Home Premium, Ultimate)
- SMTP Server required if electing to use Email notification.
